ScrubServe®

ScrubServe® – The Automated Scrubs Management System
Save money, space and labor at your property

Typical savings with ScrubServe could allow your property to reduce scrub replacement costs by 90% and associated laundry costs by 40%.

ScrubServe is a medical scrubs dispensing system that will control the distribution of scrubs only to authorized staff.

The Dispenser and Receiver operate together to enforce a credit and debit based operation, this limits the number of clean scrubs staff can access allowing you to regain and maintain control of your scrubs inventory. Simple!

ScrubServe®

How does ScrubServe work?

ScrubServe is an automated medical scrubs dispensing system that controls the issue of scrubs only to users with an authorized ID-badge.

When issuing clean scrubs the dispenser will validate their ID and if users have sufficient credit, the slot-door will open allowing them to take clean scrubs.

To reduce issue time the system records the set size applicable to each user. It is possible to select an alternative size if for example a particular size is out of stock at the time.

ScrubServe will only allow staff access to a pre-determined number of scrubs set via their credit limit. Once their credit limit is reached, further issue of clean scrubs will be declined. The dispenser is available in 160, 200 or 240 compartment capacities.

The Dispenser can issue any number of scrubs per day simply by reloading the unit. However, depending on the number of staff who require access to scrubs the dispenser capacity should be chosen so as to minimize the number of daily refills required.

ScrubServe Receiver

ScrubServe®

Staff must return soiled scrubs via the Receiver to receive credit.

Using their ID-badge staff return soiled scrubs using the receiver. Their ID-badge is used to unlock the deposit chute allowing them to deposit scrubs.

Scrubs that are deposited correctly will reduce their credit limit allowing the user to obtain further clean scrubs.

Every scrub returned is registered and digitally photographed so as to eliminate abuse of the system. Any foreign item deposited into the receiver will be tagged with the offending ID-badge number so the particular user can be identified.
