Staff uniforms are hung securely on the conveyor using static rails.

A static rail design means only the overhead pick-off mechanism travels to select the correct uniforms at speed.

Speed means employees are not delayed by the uniform service.

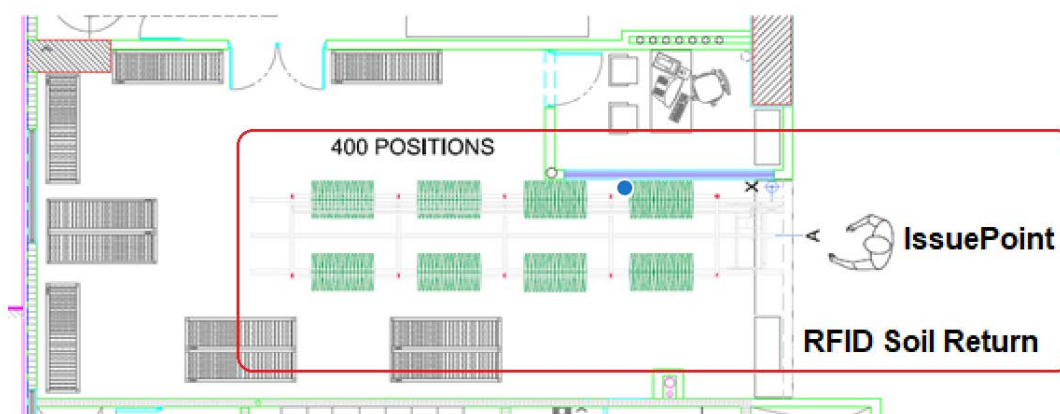

Staff use their ID-badge or PIN at the issue point touchscreen to select the uniforms they required.

In less than 20-seconds uniforms are delivered.

Using RFID chips all garment transactions are recorded.

Typical Floor Plan for 400 Staff
